

IN THE CLAIMS

Claim 1 (currently amended): A mask comprising:

an outer layer including a plurality of hair members provided on outer peripheral portion thereof to form a hairy structure and to be formed as a surfactant device to spoil surface tension of moist that are attached onto said hair members of said outer layer, said outer layer being treated with anti-virus and/or anti-germ medical materials to increase an anti-virus and/or anti-germ effect of said outer layer,

an intermediate layer of active carbon materials attached onto said outer layer, for absorbing odors, nervous or poisonous gases, and for filtering viruses, or germs, and

an inner layer of anti-moist cloth materials attached onto said active carbon intermediate layer, for engaging with users, and for preventing said active carbon intermediate layer from contacting with the users,

said inner layer and said active carbon intermediate layer and said outer covering layer being secured together with stitches to form an integral structure, and to prevent said inner layer and said active carbon intermediate layer and said outer covering layer from being disengaged from each other.

Claims 2-4 (canceled).
